College Park, MD (+1) 227 275 1907 dmeshram@umd.edu linkedin.com/dhairyashil-meshram github.com/dhairya-senpai

Education

Master of Engineering in Cyber Security

Aug 2025 - May 2027

University of Maryland

GPA: 4.0/4.0

Coursework: Hacking of C programs, Security Tools for Information Security, Digital Forensics and Incident Response

Bachelor of Engineering in Computer

Aug 2019 - May 2023

Savitribai Phule Pune University

CGPA: 8.59/10.0

Coursework: Cyber Security & Digital Forensic, Computer Networks and Security, Blockchain Technology, DSA, OOPs, OS

Technical Skills

Languages: Java, Python, HTML, CSS, Javascript, React JS, Groovy

Frameworks: Flask, Django

Database: MySQL, MongoDB

Cloud Tools: AWS, Azure

Specializations: Machine Learning & Data Science

Work Experience

Accelya | Quality Assurance Engineer — I

July 2024 – Aug 2025

Java, Katalon, REST APIs, AWS DynamoDB, AWS Lambda, AWS CloudWatch, GitLab CI/CD, SonarQube

Pune, India

- Developed and validated airline service workflows supporting 10+ APIs across ticketing, seat map availability, order history, offer management, and order versioning converting third-party airline XML payloads into standardized JSON to enable seamless cross-system integration.
- Architected cloud-backed service infrastructure handling 10K+ daily API responses using AWS DynamoDB for persistence, AWS Lambda for automated airline configuration updates, and AWS CloudWatch to monitor 99.9% service uptime across order lifecycle and versioning components.
- Delivered a successful beta product launch for six global airlines (Lufthansa, Qatar Airways, Hawaiian Airlines, American Airlines, and others) by authoring 200+ unit tests, achieving 90%+ code coverage via SonarQube, automating validations with Katalon, and integrating quality gates into GitLab CI/CD pipelines to reduce deployment timelines.

Annasaheb Magar College | Research Intern

Sept 2023 – June 2024

Python, Machine Learning, Random Forest, AES-256 Encryption, Wireshark, Network Traffic Analysis, SQL,

Pune, India

- Engineered a Smart Healthcare Monitoring System using Random Forest and Neural Networks to analyze real-time patient vitals, achieving 93% prediction accuracy while enforcing AES-256 encryption and role-based access controls to secure sensitive medical data.
- Implemented a Python-based Network Traffic Analyzer leveraging Wireshark and custom detection algorithms to identify 50+ suspicious activities, including port scans and SYN flood attempts, while supporting cybersecurity education through documented research and awareness sessions.

Sunrise Group | Web Developer Intern

Feb 2022 – May 2022

WordPress, PHP, JavaScript, HTML, CSS, REST APIs, Custom Plugins, SEO, Google Analytics

Jaipur, India(Remote)

- Developed a full-stack e-commerce platform using WordPress, custom plugins, PHP, JavaScript, and REST APIs, implementing WCAG accessibility standards and automated unit testing to reduce inventory management overhead by 70%.
- Enhanced website performance and discoverability by applying SEO best practices and Google Analytics-driven optimizations, delivering 45% higher organic traffic, faster page load times, and 350+ monthly visitors, while building a dedicated logistics website to streamline operational workflows.

Projects

Tender Allocation Website | Solidity, Blockchain, Smart Contracts, Cryptography, Web3

[Github](#)

- Architected a blockchain-based procurement platform leveraging smart contracts, immutable ledgers, and decentralized workflows to enforce transparency, auditability, and integrity within government tender allocation processes.
- Hardened tender data using layered cryptography including AES-256 encryption, ECDSA signatures, RSA key exchange, and Merkle trees to ensure confidentiality, authenticity, and tamper resistance.
- Validated contractor selection through consensus-backed cost-optimization algorithms, mitigating fraud, eliminating manual bias, and strengthening trust, non-repudiation, and security assurance in public procurement systems.

Handwritten to Editable Text Converter | Python, OCR, CNN, VGG16, RNN, Machine Learning, Multilingual NLP

[Github](#)

- Developed a multilingual OCR pipeline leveraging CNN, VGG16, and feature extraction to recognize handwritten Hindi, Marathi, and English text, generating editable PDFs with 87% recognition accuracy.
- Enforced document security through AES-based encryption, cryptographic hashing, RBAC authorization, and secure file handling to protect sensitive government records during ingestion, processing, and storage.
- Delivered a production-grade solution sponsored by India's Ministry of Rural Development, enabling privacy-preserving digitization of Aadhaar and license records across Maharashtra rural offices.
